Projects

Waymore

- Waymore is a versatile marketing platform providing tools for integrating marketing channels, segmenting audiences, and creating interactive experiences.
- Developed high-performance REST APIs and proxy APIs for seamless communication within the subsystem using Node.js, improving API response times by 30% to enhance data flow efficiency.
- Wrote unit tests to ensure code reliability and stability.
- Built and maintained dynamic, responsive user interfaces using React, ensuring smooth user experiences.
- Understood the existing micro-service structure and designed architecture for new implementations.
- Utilized RabbitMQ to manage campaign message flows across system components.
- Tools Used: React, Node.js (ExpressJs), Redis, RabbitMQ, MongoDB, MySQL 8.

All Sports

- All Sports is a web platform for a national sports event, displaying information on 43 sports, including sports profiles, medal information, event details, and schedules.
- Integrated RESTful APIs with React(FE), ensuring seamless data flow and synchronization with backend services
- Built a robust backend to support front-end functionalities.
- Managed data from multiple vendors providing detailed points for each sport.
- Built a robust backend to support front-end functionalities
- Tools Used: React.js, Laravel, MySQL 8, JQuery.

SMS (School Management System)

- SMS is a school management application with roles for Admin, Parent, Teacher, and Accounts. The platform allows for scheduling, attendance management, report sharing, and fee payments, with notifications sent to parents.
- Participated in the entire SDLC, from requirements gathering to detailed design and development.
- Built high-performance REST APIs for major modules in the application.
- Implemented cron jobs to manage recurring processes.
- Tools Used: Node.js (ExpressJs), AngularJS, jQuery, MySQL 8.
